

Business Question and Visualization Report

Date	24 September 2024
Team ID	Xxxxxx
Project Name	Predicting Plant Growth Stages with Environmental and Management Data Using Power BI
Maximum Marks	5 Marks

Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making.

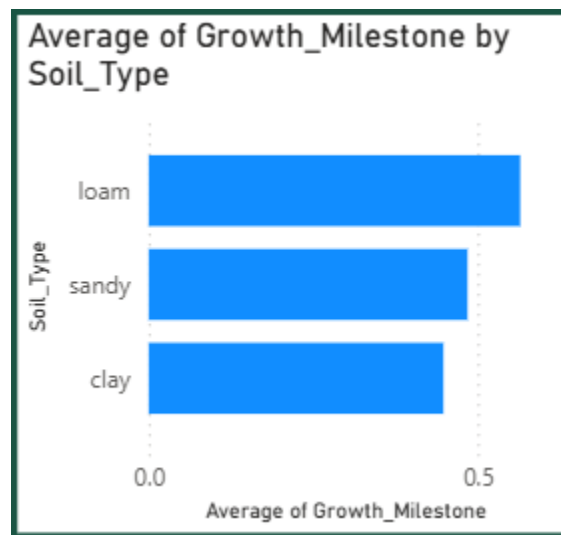

The goal of this project is to visualize relationships between environmental factors and plant growth performance, transforming complex agricultural data into simple, interpretable insights.

The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Power BI. Well-framed questions help in identifying key metrics, selecting relevant data, and building visualisation that provide insights.

Business Questions and Visualizations

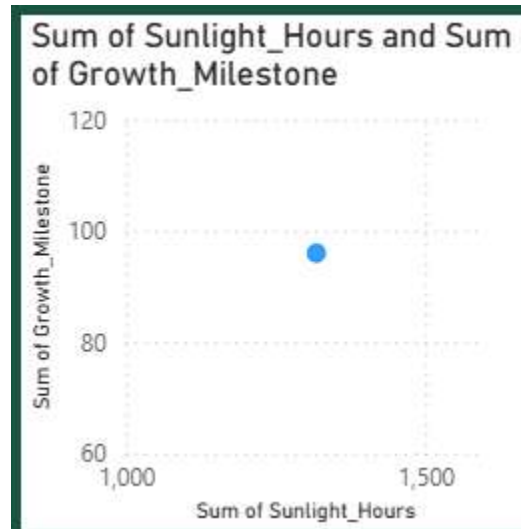

- Which soil type shows the highest plant growth success?

- Visualization:

2. How does sunlight affect plant growth?

- Visualization:

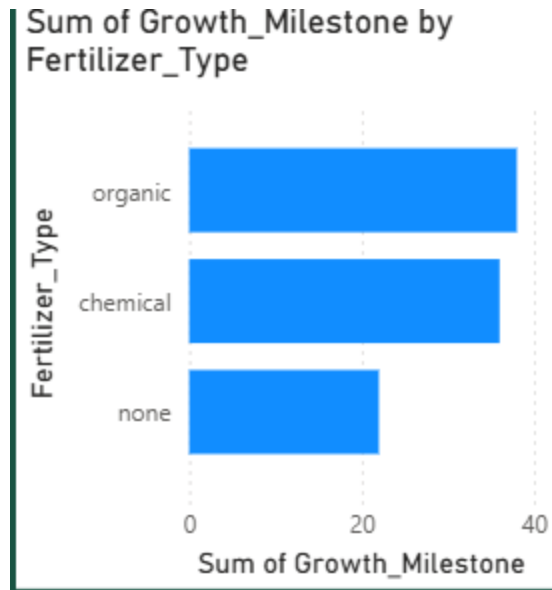

3. What is the average humidity and temperature for each soil type?

- Visualization:

2,379.69	5,419.05	636.53
Sum of Temperature	Sum of Humidity	Sum of Sunlight_Hours

4. Which fertilizer type performs best for plant growth?

- Visualization:

5. Overall growth success rate

- Visualization:
